This sequence is the actual sequence for pIG0552 which is an example of a vector of the invention. The vector is for expression of a nucleic acid casequence in a cell, and comprises: (a) a nucleic acid caseatte containing a sequence encoding insulin-like growth factor-1 (IGF-1); (b) a sequence encoding region including one or more sequences necessary for expression of the nucleic acid caseatte, and lacking the coding a position for inserting the nucleic codid caseatte, and lacking the coding sequence of a gene with which it is naturally associated; and (d) a 3' flanking region, including a codid caseatte and comprises a sequence from a growth hormone 3'-UTR. The coefficient of the position for inserting the nucleic acid caseatte and comprises a sequence from a growth hormone 3'-UTR. The cherapy. It can be used for the delivery of IGF-I for treating diseases such as muscle atrophy, diabetes, neuropathy, osteoporosis, and growth disorders. They can be used for the delivery of IGF-I for treating diseases can be used for the disease such as Type I or Type II diabetes, genetic disease such as Type I or Type II diabetes, genetic disease such as Type I or Type II diabetes, genetic disease such as Charlanders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   2885
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        2706 CIAGACGIAATCATGGTCATAGCTGTTTCCTGTGAAATTGTTATCCGCTCACAATTCC 2765

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            A method has been developed of treating urinary incontinence (UI) in mammals. The method comprises delivering a nucleic acid vector for the expression of a growth factor or neurotrophic factor in a tissue or tissues. The present sequence represents the expected upper sequence of plasmid pigloss nucleotides 1.500 from the present invention. Due to the growth and stimulatory effects of growth factors and neurotrophic factors, introducing these factors to degenerated muscles in the urinary system can improve UI by enhancing both their integrity and neural innervation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             2706 CTAGACGTAATCATGGTCATAGCTGTTTCCTGTGTGAAATTGTTATCCGCTCACAATTCC

This sequence is the expected sequence for pIG0552 which is an example of a vector of the invention. The vector is for expression of a nucleic acid as sequence in a cell, and comprises: (a) a nucleic acid cassette containing a sequence encoding insulin-like growth factor-I (IGF-I); (b) a cell, and comprises: (a) a nucleic acid cassette containing a sequence encoding insulin-like growth factor-I (IGF-I); (b) a containing containing region including one or more sequences necessary for skeletal alpha-actin gene; (c) a linker connecting the 5' flanking region of the nucleic acid cassette, and lacking the coding sequence of a gene with which it is neturally associated; and (d) a 3' flanking region, including a neturally associated; and (d) a 3' flanking region or both, where the call and comprises a sequence from a growth hormone 3'-DTR. The cassette and comprises a sequence from a growth hormone 3'-DTR. The cassette and comprises a sequence from a growth hormone 3'-DTR. The cassette and comprises a sequence from a growth hormone 3'-DTR. The cassette and comprises a sequence from a growth hormone 3'-DTR. The cassette and comprises a sequence from a growth hormone 3'-DTR. The cassette and comprises a sequence from a growth hormone 3'-DTR. The cassette and comprises a sequence from a growth hormone 3'-DTR. The cassette and comprises a sequence from a growth hormone 3'-DTR. The cassette and comprises the calivory of IGP-I for Ireating diseases cuch as muscle arrophy, diabetes, genetic disease such as Type I or the passible and passes, a theroselectoric, cardiovascular, cerebrovascular, or peripheral vascular disease, haemophilia, inflammation and side-effects from anti-cancer and anti-viral druyes. The vectors can also be used to create transgenic animals for research or livestock improvement.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             2706 CTAGACGTAATCATGGTCATAGCTGTTTCCTGTGTGAAATTGTTATCCGCTCACAATTCC 2765

```
This invention describes novel expression vector systems containing RNA stability elements from 3. flanking sequences used for establishing expression of a nucleic acid sequence within a tissue. The vectors also facilitate enhanced expression in tissues and target expression with tissue specificity. The expression wectors can be used to treat diseases through gene therapy by targeting the vector to specific tissues. Diseases that can be treated include muscle arrophy associated with neurological, muscular or systemic disease, aging by causing tissues to express and secrete clotting factor into the circulation, atherogenesis and secrete clotting factor into the circulation, atherogenesis and secrete clotting factor into the circulation, atherogenesis and atherosclerotic cardiovascular, cerebrovascular or peripheral-vascular disease by causing tissues to express factors involved in tissue metabolism. They can be used to replace genes of inherited genetic cells to produce particular proteins or RNA in vitro. To create transpend; animals which can be used for research into human diseases, casseshing novel therapeutic methods, assessing the effect of chemical and physical carcingens and for studying the effect of chemical and physical carcingens and for studying the effect of chemical and physical carcingens and for studying the effect of chemical and physical carcingens and for studying the effect of chemical and physical carcingens and for studying the effect of chemical and menuse response. These vectors provide controlled expression of the genes they carry and produce a significantly high level of expression.

Cubing 3 UTR sequences reduces the decay rates of the mRNAs encoded by the vectors which teachers and expression.
                                                                                                                                                                                                                     Plasmid pIG0335; expression vector; treatment; disease; RNA stability element; game therapy; muscle atrophy; neurological; muscular disease; systemic disease; ading; trophic factor; haemophilia; clotting factor; atherogenesis; atheroscierotic; cardiovascular; cerebirovascular; peripheral-vascular disease; hormone deficiency; diabetes; transgenic animal; carcinogen; regulatory element; limine response; ds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 TELEFAX: 8015319168
INFORMATION FOR SEQ ID NO: 5:
SEQUENCE CHARACTERISTICS:
LENGTH: 11093 base pairs
TYPE: mucleic acid
STRANDEDNESS: double
TYPE: not relevant
MOLECULE TYPE: other nucleic acid
DESCRIPTION: /desc = "Construct comprising
DESCRIPTION: portions of Bos taurus beta casein gene and genes encor
DESCRIPTION: amphipathic peptide and green fluorescent protein"
HYPOTHETICAL: YES
ANTH-SENSE: NO
FATURE:
NAME/KEY: exon
LOCATION: 1801.1834
Sequence 5, Application US/08723306
Patent No. 5856178
GENERAL INFORMATION
APPLICANT: White PhD, Kenneth
APPLICANT: White PhD, John
APPLICANT: White PhD, John
APPLICANT: Reed, William
TITLE OF INVENTION: Peptides in Mammalian Transgenic Organisms
NUMBER OF SEQUENCES: 32
CORRESPONDENCE ADDRESS:
ADDRESSEE: Trask Bitt and Rossa
STREET: P.O. Box 2250
CITY: Salt Lake City
STATE: Utah
CONDITY: Salt Lake City
STATE: Utah
